

Expert dealers who know HVAC know AirEase®

EHX™ TECHNOLOGY: Inside every AirEase® furnace, you'll find our proprietary heat exchanger with EHX™ Technology. Stainless steel plates are crimped together, rather than welded, to reduce fatigue from heat strain and improve durability. Compared to conventional heat exchangers, the patented design offers more surface area for greater heat transfer, and advanced airflow properties allow more even heat distribution with no hot spots. As tough as it is dependable, EHX Technology is designed and tested to outperform our high standards and your expectations.

QUIET COMBUSTION™: The burners inside every AirEase furnace aren't like the burners you'll find in other furnaces. No detail was overlooked in their design, from their deeper, specially shaped fuel channels to the increased number of jets. As a result, AirEase furnaces operate with extreme reliability, impressive efficiency and very low noise levels.

MHT™ TECHNOLOGY: Inside every AirEase air conditioner and heat pump, you'll find a brilliant approach to cooling called MHT™ Technology. In AirEase's proprietary heat transfer system, a specially designed fan shroud pulls air evenly throughout the air conditioner's coil surface. The coil features rifled tubing to enhance refrigerant flow, while lanced coil fins increase surface contact between metal and air. All combine for maximum heat transfer and efficiency.

TRI-DIAMOND™ TECHNOLOGY: AirEase's unique design increases the packaged units' heat exchanger surface area, making heat transfer more efficient. This allows for a smaller heat exchanger that requires less energy to operate.

QUIET SHIFT™ TECHNOLOGY: Allows heat pumps to enter defrost mode without excessive noise. Since refrigerant pressure is allowed to equalize before the switch, the heat pump can dissipate performance-robbing frost and ice quietly.

CLEAN SWEEP DEFROST™: By starting the defrost cycle at the bottom of the coil, and routing hot gas from the bottom up, AirEase units with MHT Technology have a more thorough defrost cycle. This will reduce the number of defrost cycles necessary, while also keeping bottom drainage holes free of frost.

PRECISION SERVICE™ TECHNOLOGY: Thoughtful design and precise part location of each component means you can work more efficiently and effectively on every job. Features like simplified fan removal, threaded pressure switches, fewer screws per panel and corner-post-mounted access panels, allow you to finish jobs quicker, which is something that you and your customers will appreciate.
